```
Session.viewSessions = (result) => {
    const query = "SELECT
id,batchId,sessionName,date,time,type,remarks,venueORlink,trainerId,attendenceCode,addedDat
e, updatedDate FROM sessiondetails WHERE isActive = 1 AND deleteStatus = 0 ";

    db.query(query, (err, res) => {
        if (err) {
            console.log("error: ", res);
            result(err, null)
            return;
        }

        console.log("session: ", res);
        result(null, res);
    });
};
```

Change this to

```
Session.viewSessions = (result) => {
    const query = "SELECT id, batchId, sessionName, date, time, type, remarks, venueORlink,
trainerId, attendenceCode, addedDate, updatedDate FROM sessiondetails WHERE isActive = 1
AND deleteStatus = 0";

    db.query(query, (err, res) => {
        if (err) {
            console.log("error: ", err);
            result(err, null);
            return;
        }

        // Format the date for each session
        const formattedSessions = res.map(session => ({
            ...session,
            date: session.date.toISOString().split('T')[0]    // Formats the date as 'YYYY-MM-DD'
        }));

        console.log("sessions: ", formattedSessions);
        result(null, formattedSessions);
    });
};
```
